

~~TOP SECRET RUFF~~

WORKING PAPER

31 July 1967

Soviet Bloc Branch -

25X1

SUBJECT: Materials Handling in CSD/BBB

CSD/SBB presently handles one complete set of target briefs plus a second and third copy through WAC 340 in support of KH missions.

*why 2+3
Briefs looked at?
What is in packet?*

These briefs must be sorted by hand and packed into individual covers by WAC, filed on carts, and physically transported from 5th to 3rd floor.

*-PAG - who
Serves IAS?*

Presently (July 1967) this involves approximately 66,000 pages of briefs. Only some 36,000 of the 66,000 pages go to PAG, since 20% of the original set is destroyed in CSD. 50% of the second copy and 80% of the third copy are also destroyed in CSD. At present we do not have a computer select capability to print only those target briefs needed for a mission thus resulting in a manual selection and destruction of target briefs as stated.

25X1

A typical KH-4 mission requires CSD processing/dissemination of some 15,000 pages of material prior to the OAK. This consists of the Daily Summaries, Preliminary Summaries, Final Summaries, Projected Target Lists, Header Control Lists, PCMC and CMCI's. Those copies of these various lists which go to components other than CSD or PAG must be separately controlled. Almost 10,000 pages of this material must be distributed on floors 2, 3 and 4.

~~TOP SECRET RUFF~~

TOP SECRET RUFF

WORKING FILE

[] requires similar handling for the MCD, Daily and 25X1
inal Pricats, Header control Lists, and CMCI's. The most recent mission
totalled 16,300 pages plus some 2,500 pages of re-run materials (the correction
of errors in transmission, etc.).

Once each month CSD/SBB also packages the up-dated target brief file
into a series of "Correcting Copy" books. This consists of some 28,250 - *Reference?*
pages, filed in CSD/SBB in approximately 35 volumes and in NBB in an additional
10 volumes *now block branch*
